

DocQment Enterprise Platform™ with Integrated Speech Recognition

Automating **Clinical Documentation** Across **the Enterprise**

Award-winning technology developed and proven by MedQuist: the world's largest transcription company and the #1 user of medical speech recognition.

Are you up to speed with your clinical information processes?

Challenged with increasing documentation requirements and lower reimbursements, healthcare providers are pressed to find solutions that extend beyond the medical records department. Done right, a clinical documentation solution will not only improve transcription, but also optimize clinical information workflow, speed up the revenue cycle, and help you achieve regulatory compliance. It need not disrupt your personnel or budget.

Do you have a speech recognition strategy?

By capturing spoken dictation and turning it into text, speech recognition dramatically improves productivity and lowers costs. Integrated into the MedQuist DocQment Enterprise Platform, the MedQuist speech recognition system generates a high quality, ready-to-edit, fully-formatted text document. Productivity actually increases with time, as users and system adapt to each other. The work is routed to the right transcriptionist and right department via sophisticated document routing and management functions within the platform.

Dictation is captured and seamlessly routed through the DocQment Enterprise Platform. The powerful speech recognition engine quickly converts audio files to text, links them, then automatically routes them to the right editor.

Move up the technology continuum to advance quality of care

Usability, reliability and interoperability are key concerns. MedQuist's DocQment Enterprise Platform is a 4th generation platform that seamlessly integrates with all clinical documentation systems, both legacy and current. And since it is an ASP that resides on our secure internet-hosted platform, you won't have to worry about downtime and server maintenance.

Experience Adds Up

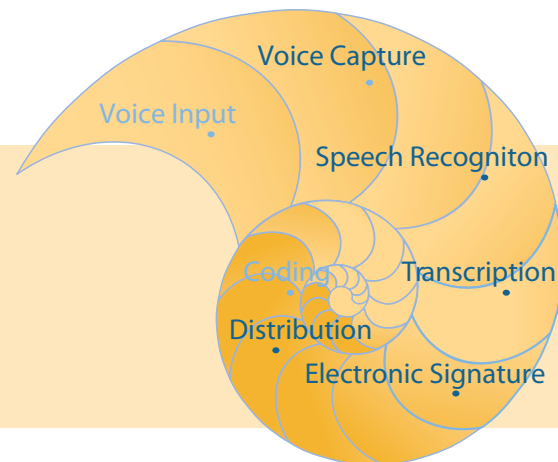

MedQuist understands how to deploy speech recognition for clinical documentation better than anyone. With more than 1,500 successful implementations for our customers—and over 6,000 of our own transcriptionists using it—we know how to make speech recognition work for your people and processes.

“Transcriptionists have truly embraced this new technology...now it takes just seconds to add a new transcriptionist or doctor.”

A Complete Document Workflow Solution

- Increases - productivity significantly
- High tech without the high investment
- Proven in more than 1,500 implementations
- Interfaces with HIM enterprise systems

Business Benefits

- Speeds up the revenue cycle
- Increases patient satisfaction
- Improves physician satisfaction
- Turns reports around faster
- Produces higher quality reports
- Supports compliance
- Results in a quick R.O.I.
- Offers pay as you go pricing

Technology Advantages

- Internet-hosted for easy access
- Integrates with existing systems
- Scales to the needs of your organization
- Requires very little of your technical resources
- Built-in redundancies

Full Functionality

- Voice Capture
- Integrated speech recognition
- ADT matching for more accurate patient data collection
- Document management
- State-of-the-art workflow management tools
- Point-to-Point document routing
- Electronic signature
- Single dashboard view
- Automated formatting

Industry Leadership

- Award-winning internet-based enterprise platform
- The largest MTSO in the market
- Largest user and provider of speech recognition in U.S. healthcare
- Partner with AHDI (formerly AAMT) in dictation best practices, standards and pricing models

Speech Recognition Experience

- Over 65,000 authors
- Accessed by over 3,000 editors
- Processes more than 400 million lines per year
- Implemented over 1,500 times
- Improves productivity by a minimum of 50%**
- Increases quality significantly

Bottomline: Technology + Service = Faster Revenue Cycle

*Rated #1 for front-end speech recognition by customers according to KLAS Enterprises' "Best in KLAS" in 2006 and 2007.

**Combined productivity of DocQment Enterprise Platform and Speech Recognition application over previous or legacy platforms on average.
